Design Spec
COMP126 Final Project
Ashley Suchy
Spring 2020

OVERVIEW OF FINAL PROJECT

For my final project, I decided to use my initial final project plan, which was to create a personal portfolio website. I plan to include a homepage, and a secondary page (contact me page). The website will indicate that there will be other pages, as I plan to implement them in the future, however, they will not be included as a part of this project.
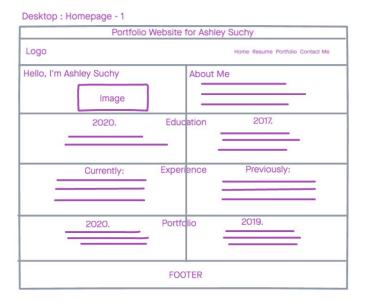

DESIGN RATIONALE

The objective of this website is to inform potential employers or coworkers about my experience, skills, and to provide an overview of both research and web design projects that I have completed or contributed to. The home page will provide an overview of my education, experience, and portfolio. The resume page will provide information about my past work and volunteer experience, as well as my skills. The portfolio page will provide information about research, web design, and other projects that I have completed. The contact me page will provide my contact information and include an email form.

Due to these goals, the website will convey a more professional look, while still retaining the modern artistic feel that I want it to have. I believe that having a professional website is the best approach because the website's audience will be people that I may work with in a professional setting.I plan to achieve my design goals by having a very "clean" looking site, with many straight lines. I will include only professional-looking images. I will include the artistic and modern vibe by using blue and yellow colors, in addition to two shades of grey. The website will retain its professional feel, because I will not use too many colors on one page, or any inappropriate fonts. I will use two fonts throughout the website. There will be one for headers, and one for paragraphs/hyperlinks. I will add a logo to the website to help convey a more professional feel to the website.

LAYOUT WIREFRAMES

** If these images below are too blurry, here is the link to the design on InVision for you to view.
